Implementation case of K8s(PaaS-Ta) in Water supply special accounting ERP system of local government

Lee Kyungjong *

1. Business overview

○ (Business name) Construction of the next generation water supply management information system.

○ (Business period) 18 months from the date of signing the contract / Long-term continuous business.

2. Business Promotion Background

○ (Business Purpose) Realization of user-centered intelligent management information service that supports efficient business management

○ (Domestic Environment) There is a need for efficient management of waterworks in order to revive the local economy, which has been contracted due to COVID-19, and to solve problems that have arisen in the preparation of basic data calculation plans for water bills.

○ (Government policy) Reflects the system on the demand for strengthening autonomy and accountability of budget management and mid- to long-term budget compilation through the implementation of the budget system for each project.
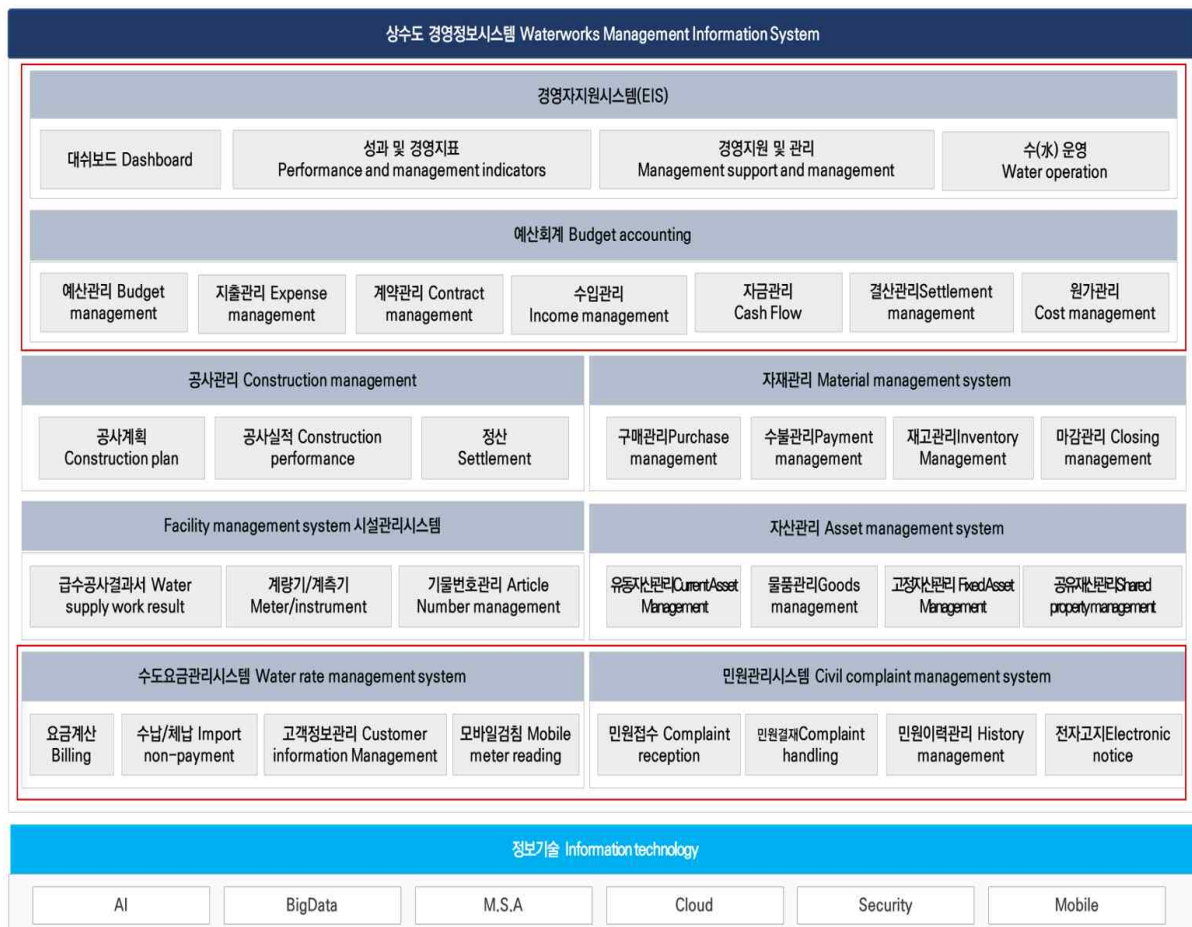

3. Business scope

3.1 Conceptual diagram of target system

◦ Conceptual diagram of water supply system based on iot
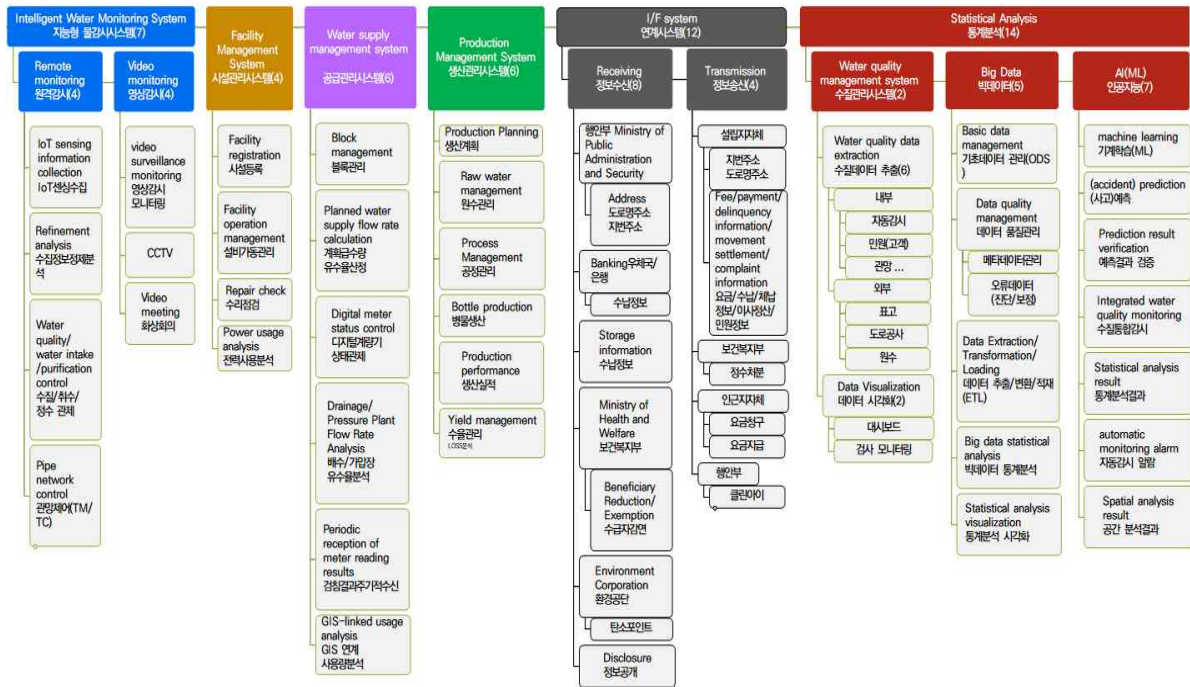

◦ Business function of target system(Red Line)

3.2 Expected effect upon deployment

○ Through the introduction of the waterworks management information system, a high level of service is provided to citizens, and work process simplification and speed are provided in terms of work productivity and efficiency.

○ Ability to actively respond to environmental changes such as changes in laws and systems.

○ In terms of user convenience, improved convenience of settlement reports, improved utilization of information, and reduced work processing time by expanding and establishing links with internal/external systems.

○ Increase work efficiency and productivity through comprehensive business processing of the budget accounting system including asset management and double-entry bookkeeping.

○ Reduction of data creation time and management cost by higher-level organizations and related organizations through automation of management system data processing.

○ Improving public trust by expediting the processing of fees and services to the public and responding efficiently.

## 4. Business details

4.1 Infra Environment on Kubernetes[2]

○ Cloud Service Environment (KISA/CSAP[3])

OS	Linux 8.x		Windows	
WEB / WAS	Jeus	Apache		Tomcat 8.x
DBMS	Oralce		Maria DB	
Egov-Framework	Egovframe v3.10			
JAVA	JDK 1.8			
UI/UX	html5	CSS3	DHTMLX 5.1	jQuery 3.4.1
Reporting Tool	Jesper 6.8.0 or Clip Report v.6.0			

---

2) Kubernetes is a portable, extensible, open-source platform for managing containerized workloads and services.

3) A system that enables users to use cloud services with confidence by evaluating and certifying the compliance of information protection standards with respect to services provided by cloud service providers

○ Establishment of M.S.A environment based on Kubernetes (PaaS-Ta[4])

	e-Government Framework Environment		MSA Architecture
Config			
e-Gov	Advantages	• Configurable as a single server • Low cost with single server • Ease of development source management due to development source integration • Ease of processing for a single task	
	disadvantage	• It is difficult to respond to all service failures with a single server • Difficult to expand service	
MSA architecture	Advantages	• Easy to extend service • Easy to respond to failures as servers are configured for each service • Ease of processing for multiple tasks	
	disadvantage	• High cost due to increased number of servers	

4.2 Plan to carry out POC for stable deployment.

○ Efficient DB partitioning of physical and logical services of the system.

○ Minimize risk factors by acquiring developer experience according to changes in service call method.

○ Finding a way to break free from dependency on the database engine.

○ Oracle DB engine conversion to reduce operating costs (Maria, MySQL, etc.)

○ Container Separation: Container construction for each service applied

○ Scope of work: Conduct on-site tests for budget accounting of the contractor.

---

4) "PaaS" in PaaS-Ta refers to PaaS (Platform as a Service) based on the open sources. "TA" means 'get on' or 'ride' in Korean, as in riding on PaaS.

4.3 K8s(PaaS-Ta) Operation Service POC(Proof of concept) Review Details

1. **When applying Kubernetes as a service in pasta**
(파스타 서비스로 쿠버네티스 적용시)

What is the difference between increasing the POD of Kubernetes and increasing the application instance in Pasta?

쿠버네티스의 POD를 늘려 가는 것과 파스타내 어플리케이션 Instance를 늘려 가는 것에 차이는?

2. **subdomain + domain 서브도메인+도메인**

PAAS-TA

budget   welcome-cf

라우트   우트

budget.paas-ta.org   elcome-cf-reg.paas-ta.org
How to distinguish only domains without exposing subdomains in real service?
실서비스에서 서브도메인 노출 없이 도메인으로만 구분 할 수 있는 방법은?

3. **Services & Databases 서비스 / 데이터베이스**

애플리케이션   서비스

Mysql-DB   서비스 명 변경

• 서비스 명 : Mysql-DB
• 제공서비스 : Mysql-Plan2-100con
• 연결 앱 : welcome-cf

In addition to the pasta service DB connection, how about the security if an external DB can be directly connected?

파스타 서비스 DB 연결 외에도 외부 DB를 다이렉트로 연결 가능 한데 다른 업체들의 상황은 어떠한지?

1. After clicking the delete button, how to recover if it is deleted even in cf cli mode?
2. How to mirror?
3. What are your backup settings?

1. 삭제 버튼 클릭후 cf cli 모드에서까지 delete 시킨 경우 복구 방법은?
2. 미러링 방법은?
3. 백업 설정은?

4. **When building three projects: budget, fee, and civil complaints**
예산, 요금, 민원 3개의 프로젝트 구축시

A) 10.0.0.101 / 10.0.0.102 / 10.0.0.103 — Budget 예산 / Water bill 요금 / Customer 민원 — physically divided. 물리적으로 나눈다

B) 10.0.0.101 — Budget 예산 / Water bill 요금 / Customer 민원 + + stor — Increase the resources you need. 필요한 자원을 늘려간다

What is the design method of other companies among A and B types?
A, B 형태중 다른 업체의 설계 방법은 어떠한지?

5. **Web development environment, service registration**
웹 개발환경, 서비스 등록
* Are there any restrictions when registering a new web development environment or service? For example, licensing issues...
* 웹 개발환경, 서비스를 신규로 등록 시 제약 사항이 있는 것인가? 라이선스 문제라든지…

6. Is it necessary to use a NAS when building a file server on the pasta platform? Is it possible to use DAS?
파스타 플렛폼에서 파일 서버 구축 시 꼭 NAS를 써야 하는 것인지? DAS를 써도 가능한 부분인지?

As a result of reviewing the above 6 items, the introduction of k8s cloud service proves **feasible**.

○ **K8s (KT PaaS-Ta) operating service example screen**

Computing	Application	DB	Storage	CDN
CloudFarm	JEUS	DBaaS for MySQL 8	Object Storage	CDN
Server	WebtoB	DBaaS for Redis	Simple Storage	
	LENA Web Server	MS-SQL	Virtual Private Storage	
	LENA Web Application Server	Tibero	NAS	

Security	Network	Management	DX Platform	Biz 스토어
웹 방화벽	VPC (Virtual Private Cloud)	DR	KT PaaS-TA	kt cloud BizWorks
웹 방화벽 Pro	SSL VPN(Beta)	Import/Export		kt cloud BizMeet
KT Cloud 클린존	Connect Hub	Auto Scaling		
	Private DNS	Watch		
	GSLB	Backup		
	Load Balancer	Managed		

Computing | Application | DB | Storage | CDN | Security | Network | Management | DX Platform | Biz스토어

4.4 K8s-based M.S.A Architcher Configuration Diagram

5. Conclusions and policy implications

5.1 Significance of business

○ Established **the first cloud service for a government agency** operated by a public official (budget management, water rate management, civil complaints)

○ Participation in government cloud policy

 - Cloud Computing Advancement and User Protection Act

○ Active response to government cloud service policy changes

※ Yoon Seok-yeol's Cloud Policy

	'Private Cloud First' Policy	
The plan is to prioritize the application of the private cloud in public work, and to expand the number of digital services available for public work to more than 350. The public cloud and SaaS products will be directly used by the government or public institutions. Data can be utilized through a digital platform, and the existing government-led problem-solving method will be changed and implemented as a platform for public-private collaboration.		

5.2 Enable Efficient use of infrastructure

○ It will be a precedent for other government systems following the establishment of the M.S.A environment.

○ Efficient resource management is possible whenever necessary by introducing K8s.

○ Through the establishment of an open source-based environment, it is possible to establish a roadmap for each institution and escape from subordination to expected business operators after placing an order.
