Global Conference

Digital New Deal
Technology Essentials
디지털 뉴딜 기술 핵심

Keynote Speech 3

차세대 이동 통신의 전망과 과제

최성현 전무 (삼성전자 삼성리서치 차세대통신연구센터 센터장)

[요약문]

2019년 세계 최초로 5G 상용화가 국내에서 이루어진 이후, 5G 기술은 다양한 산업의 핵심 인프라에 적용되고 있으며 고품질 통신 서비스에서 스마트 공장, 차량 간 통신 및 기타 새로운 서비스에 이르기까지 통신이 필요한 모든 분야에 활용되고 있다. 이와 함께 미래의 네트워크는 방대한 양의 정보를 처리 할 수 있는 능력을 요구할 것이며 더 강력한 네트워크 장비가 필요하게 될 뿐만 아니라, 비용을 낮추고 장비를 더 유연하게 만들 수 있도록 통신 기술의 소프트웨어화가 점점 더 중요해질 것이다. 현재 통신 기술이 직면하고 있는 기술적 과제들을 극복하기 위한 해결책으로 생각해 볼 수 있는 것이 소프트웨어의 기능을 강화하고 AI를 발전시키는 데 있다. 더 나아가 학계와 산업계 모두 차세대 통신 시스템인 6G를 구축하기 위한 연구 활동에 착수하고 있다. 본 강연에서는 5G 시스템의 상용화를 성공적으로 이끌기 위해서 기술이 진보하고 있는 방향과 차세대통신으로서 6G에 대한 기술 및 사회 동향, 서비스, 요구 사항, 후보 기술 등 다양한 측면에 대한 포괄적인 개요를 소개하고자 한다.

[발표자 약력]

2019년~현재 삼성전자 삼성리서치 차세대통신연구센터 센터장

2014년~현재 IEEE Fellow

2002년~2019년 서울대학교 전기정보공학부 교수

1999년~2002년 Philips Research USA, Senior Member Research Staff

1999년 University of Michigan 전자 및 컴퓨터 공학 박사

1994년 한국과학기술원(KAIST) 전기및전자공학과 석사

1992년 한국과학기술원(KAIST) 전기및전자공학과 학사

관심분야: Beyond 5G & 6G 이동통신 기술, IoT Connectivity 등

Samsung Research

Challenges and Prospect of Next-Generation Mobile Communications

Sunghyun Choi, Ph.D., FIEEE, SVP
Head of Advanced Communications Research Center
Samsung Research, Samsung Electronics

5G Requirements & Use Cases

Samsung Research

- Ultra Fast (eMBB), instantaneous (URLLC), massive connectivity (mMTC)

[ITU-R document 5D/TEMP/625]

	Performance	Applications
eMBB Enhanced Mobile Broadband	<ul style="list-style-type: none"> Peak Rate: 20 Gbps (4G: 1 Gbps) UX Rate: 100 Mbps 	<ul style="list-style-type: none"> High definition (HD) videos Virtual reality (VR) Augmented reality (AR)
URLLC Ultra Reliable & Low Latency Communications	<ul style="list-style-type: none"> Latency: 1 ms (4G: 10 ms) 	<ul style="list-style-type: none"> Remote robot control Connected autonomous vehicles Interactive gaming
mMTC Massive Machine-Type Communications	<ul style="list-style-type: none"> Connection: 10⁶ devices/km² (4G: 10⁵ devices/km²) 	<ul style="list-style-type: none"> Smart city Smart agriculture

5G Features: Network Slicing & New Spectrum

Samsung Research

Network Slicing

Flexibility to support various services in a single network

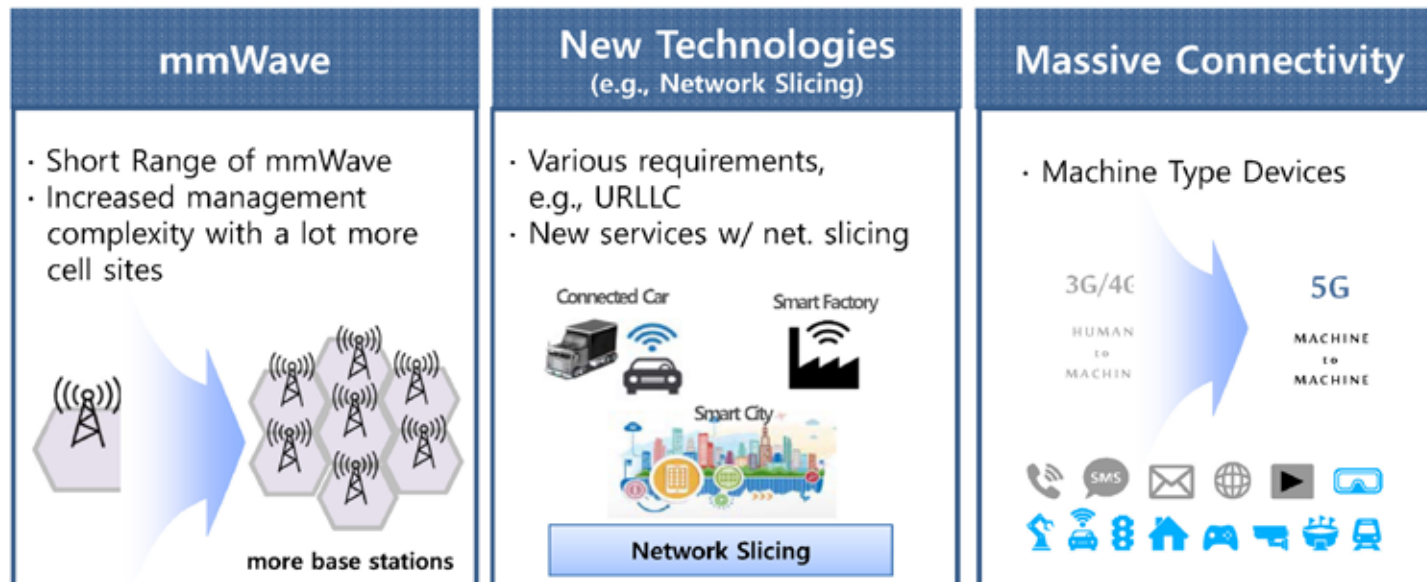

New Spectrum

Use of new spectrum including mmWave bands (e.g., 28 & 39 GHz)

Challenges in 5G

Samsung Research

Complicated network management requires
automation & scalability

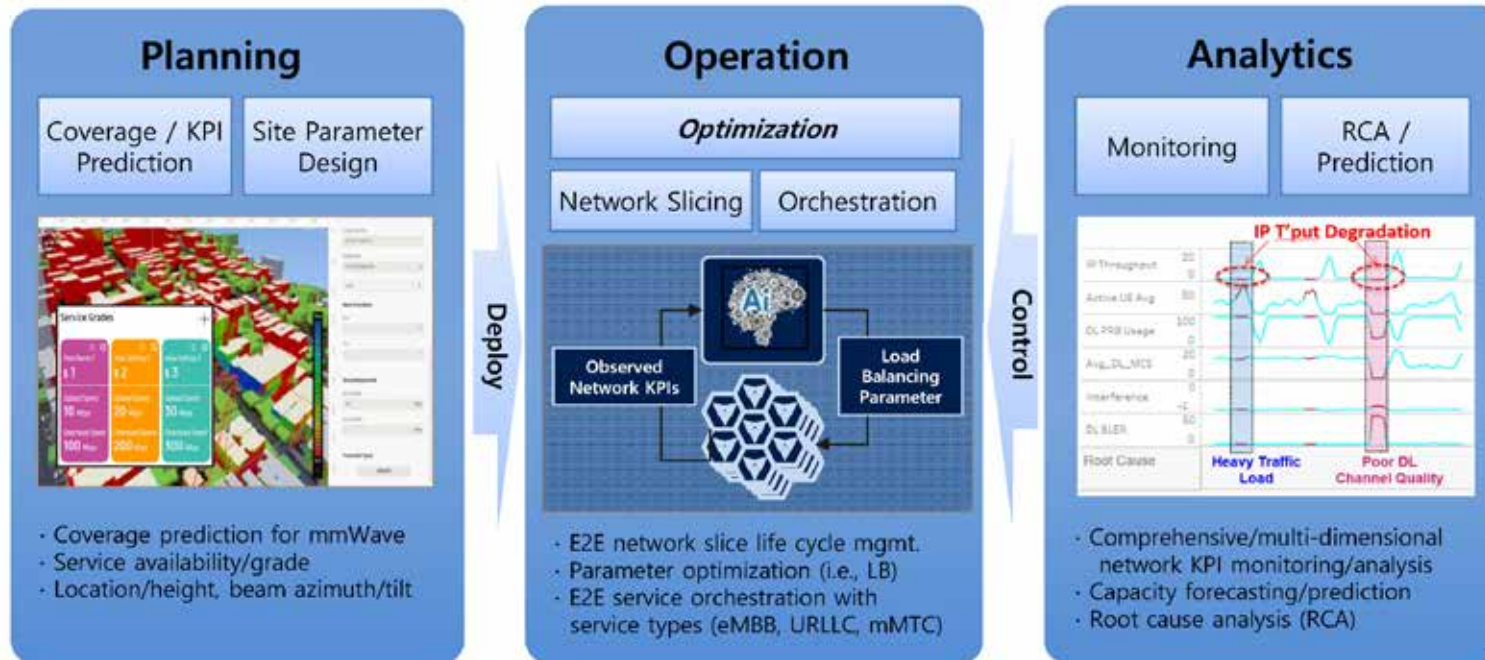

**AI/ML for
scalable automation**

Where Can AI/ML Be Used?

Samsung Research

Standards and Industry Looking at AI/ML

Samsung Research

➤ Standard groups looking into leveraging AI for network automation

	MDAS (Management Data Analytics Service)	NWDAF (Network Data Analytics Function)	O-RAN RIC (RAN Intelligent Controller)
Organization	3GPP SA WG5 	3GPP SA WG2 	O-RAN Alliance 
Target	Data analytics at OAM <u>Management Plane</u> for network performance and fault management *OAM: Operation, Administration and Management	Data analytics at Core Network (CN) <u>Control Plane</u> for network performance and service quality optimization	Automation of control and configuration of nodes (e.g., RU, DU, CU) at <u>RAN</u> for OPEX minimization * RAN: Radio Access Network (or BS)
Use cases	Per-NF/NS load analysis RAN coverage conf. optimization RAN resource & congestion analysis * NF: Network Function * NS: Network Slice	Per-NF/NS load analysis Analysis/prediction of · Per-UE/App service quality · UE mobility & traffic pattern	Traffic steering QoS-based resource optimization RAN slice SLA assurance * QoS: Quality of Service * SLA: Service Level Agreement

Intelligent RAN – Cell Design

Samsung Research

□ Antenna tilting and optimizing transmit power

- Real-time parameter optimization based on UE locations, received power, and transmit power
- Antenna tilting adjustment for optimizing system coverage and capacity maximization
 - case 1) coverage poor → tilting angle up → coverage expanded & performance down at center
 - case 2) coverage good → tilting angle down → coverage shrink & performance up at center

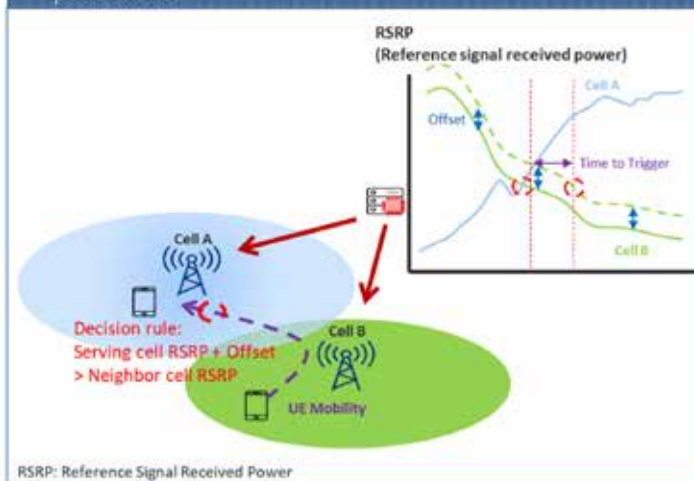

Intelligent RAN – Parameter Optimization

Samsung Research

□ Optimization of network configuration parameters and scheduler function

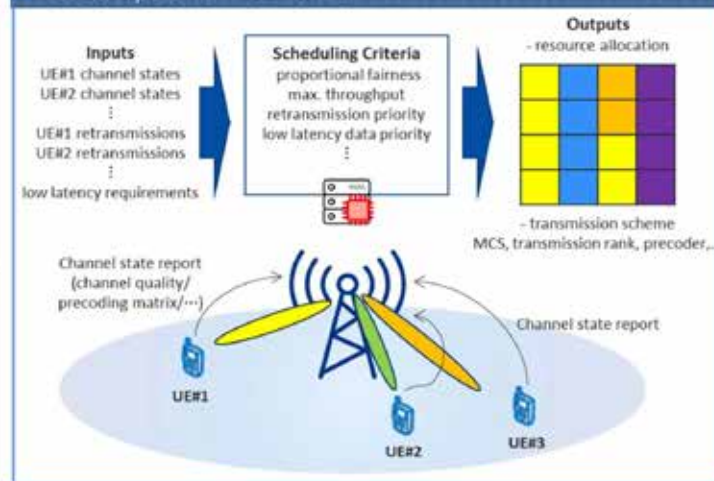

Handover Performance Index

- HO parameters affect failure rate and UE receiver performance

NW Scheduler Function Optimization

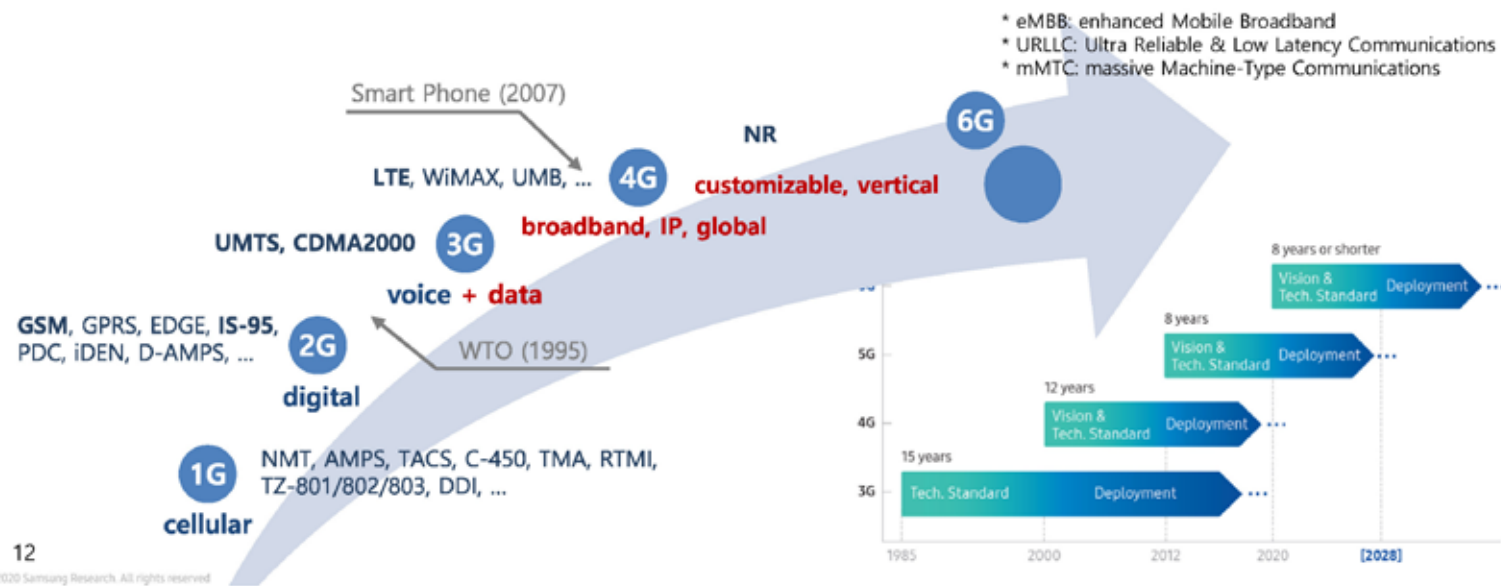

- Scheduling optimization/automation according to channel state report from UEs & KPIs

Evolution of Cellular Communications

Samsung Research

- International standards for cellular communications became mainstream beginning 3G (IMT-2000)
- Success of 4G (IMT-Advanced) triggered *IT+Comm. convergence* and *global competition*
- 5G (IMT-2020) designed to enable 3 use cases: eMBB, URLLC, mMTC

Megatrends in 2030

Samsung Research

□ Thinking about the next generation – 6G

Connected Machines

▪ Machines as Main Users

- 500 billion devices will be connected by 2030, including vehicles, robots, drones, home appliances, etc.
- Mobile devices with various form-factors: AR glasses, VR headsets, and hologram devices

Artificial Intelligence

▪ AI – New Tool for Wireless Communications

- Embedded AI in various entities will play roles of improving network performance, reducing costs, saving energy, etc.

Openness & Social Issues

- Softwarization and open source/interface are big technical trends
- Wireless communications and its infrastructure help address many social issues and resolve them

6G Services

Samsung Research

- New services to be introduced via hyper-connectivity involving humans and things

Truly Immersive XR

* Extended Reality

- Sufficient wireless capacity to be secured for higher data rate to realize Virtual Reality, Augmented Reality, Mixed Reality, etc.

High-fidelity Mobile Hologram

- Next-generation media technology presenting gestures and facial expressions by means of a holographic display

Digital Replica

- Replicate physical entities and interact with them in a virtual world without temporal or spatial constraints

6G Requirements

Samsung Research

- 6G services require substantial computing power, far higher data rate, and ultra-low latency

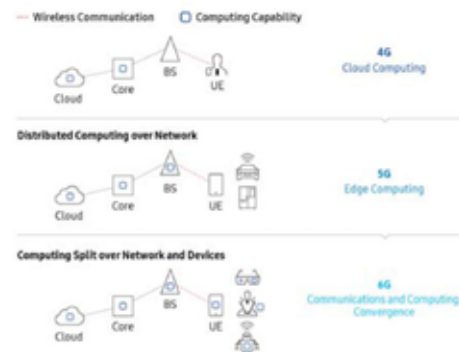

Performance Requirements

- Advanced multimedia services need higher data rate, spectral efficiency, and extremely low latency

Architectural Requirements

- Communications and computing convergence: split computing, native AI, etc.

Trustworthiness Requirements

- Openness of communication systems requires solutions for security and privacy threats:
 - Secure-by-design approach
 - Identification that AI accesses personal information
 - Mechanisms to utilize tremendous amount of information maintaining the privacy

6G Candidate Technologies

Samsung Research

- Terahertz Band
- Novel Antenna Technology
- Evolution of Duplex Technology
- Evolution of Network Topology
- Intelligent Spectrum Sharing
- Comprehensive AI
- Split Computing
- High-precision Network

[Frequency bands over generations]

[Integrated network of terrestrial and non-terrestrial networks]

[Intelligent spectrum sharing]

Key Enabling Technologies for 6G

Samsung Research

▪ Terahertz Technology

- Up to 3 THz band includes enormous available bandwidth for potential 6G services
- THz communication can also provide high-precision positioning capability
- Inherent technical challenges with ultra-high frequency to be overcome:
Severe path loss, atmospheric absorption, RF power amp efficiency, ADC/DAC, etc.

Key Enabling Technologies for 6G

Samsung Research

■ Evolution of Network Topology

- Existing technologies include relay in 4G and IAB in 5G to enable flexible network

* Integrated Access and Backhaul

- 6G expects more:

- 1) Automated configuration & optimization of new network entities
- 2) Enhanced mobility support for mobile network entities
- 3) Enhanced service continuity for user devices
- 4) Non-terrestrial network (NTN),
such as satellite & HAPS

* High-Altitude Platform Systems

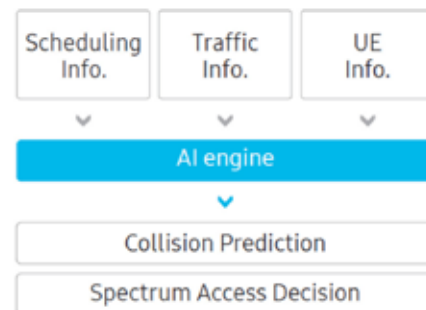

Key Enabling Technologies for 6G

Samsung Research

▪ Spectrum Sharing

- Allowing opportunistic use of underutilized spectrum can increase efficiency
- Traffic and spectrum usage pattern varies according to time, areas, and operators
- AI could realize dynamic spectrum via sharing limited amount of information among network entities

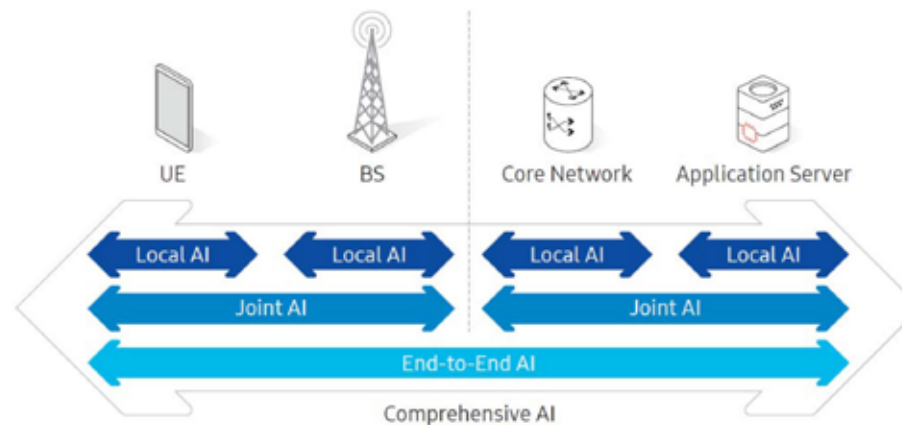

Key Enabling Technologies for 6G

Samsung Research

▪ Comprehensive AI

- Comprehensive AI help better optimize the overall system performance and network operation
- Application of AI can be categorized into three levels: 1) local AI, 2) joint AI, and 3) E2E AI

Key Enabling Technologies for 6G

Samsung Research

Split Computing

- Future applications, such as truly immersive XR, mobile holograms, and digital replica, require extensive computing to deliver real-time immersive user experiences
- Split computing makes use of reachable resources over the network, e.g., BSs, MEC servers

* Base stations, Mobile Edge Computing

Conclusion

- **What is happening now**
 - 5G commercialization
 - AI/ML-based network automation
 - Start of 6G research for 10 years down the road
- **What will be the future like**
 - Wider spread of 5G commercialization
 - Heavier usage of AI/ML for communication and network
 - Research and PoC of various candidate technologies for 6G
 - 6G commercialization as early as in year 2028!

Thank You
